

beachfront

Web3 domains for the
Neue Internet

WHY

ICANN hasn't done anything in a decade...20 years in internet time (the internet is in its 30s)

Current web3 "domains" are just nicknames for wallets (see: ENS, Tezos Domains, Solana Name Service, &c)

<1% of "domains" have a website...and it's a link page on IPFS

HOW

Handshake's blockchain is JUST for TLDs. Naming isn't an afterthought.

Handshake is just more secure DNS (DNSSEC + DANE) with Proof of Work (most secure blockchain proving method).

ICANN records handful of people in a room exchanging keys to "prove" the root is secure...with Handshake, just check the blockchain.

beachfront/'s TLD portfolio was acquired via public Vickrey-style auctions and secondary market sales/trades — the web should be more expressive with domains on TLDs people want.

WHERE

Web2 → beachfront.domains
.domains, leased to Identity Digital by ICANN

Web3 → domains.beachfront
.beachfront, owned by ME

WHEN

The seeds of beachfront/ were planted in 2004 at age 15.

Asked Jeeves "how to get my own dot com" and he said "pay \$185k to ICANN"...to *apply*.

Handshake launched in 2020 and I saw a long-awaited dream come within reach. I can be the change I wish to see in the world!!

WHO

TECH

Paul Anthony Webb

Jamar Essai Torres

PEOPLE

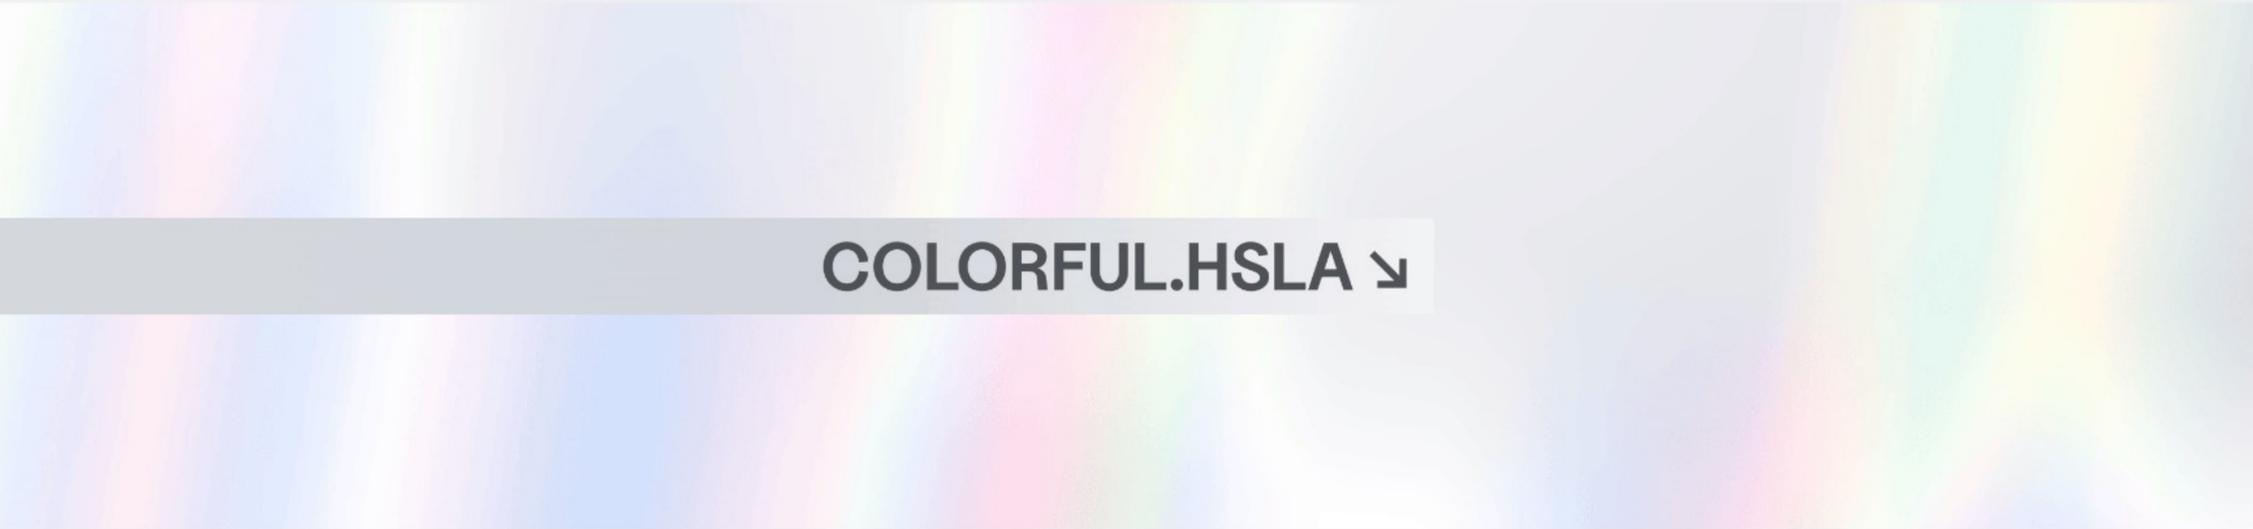

build the **Neue Internet** with domains like...

- buy.dinner
- mmo.shmup
- doc.hereinafter
- learn.banjo
- abc.homeroom
- fine.zaddy
- sports.roster
- supreme.param
- math.operand
- time.sidereal
- tighty.righty
- synergy.u20dd
- font.monotype

RECAP

beachfront/ is the culmination of a lifelong dream.

In a world of "get rich quick" and "move fast and break things," we are building *intentional* infrastructure so the future can soar.

We don't need investment. Partners will get us to our checkpoints sooner, that's all.

beachfront/ will succeed *regardless*. It is the foundation for more.

There is no exit. We're building generational companies in a \$100 BILLION industry. Again, beachfront/ is the *foundation* for more.
